Get the Most Out of Your Current Technology

Hearing device technology is constantly evolving, with new accessories and features available all the time. While hearing devices are now more powerful than ever, in order to take full advantage of all they have to offer it's important to keep up with this latest technology. The following features and accessories all utilize state-of-the-art technology in order to provide a more efficient and hassle-free listening experience.

Rechargeability

Several new models of hearing technology, including your Oticon Opn™ and Widex BEYOND Z™, allow the convenience of rechargeable technology, meaning you never have to change a battery again. And the best news? You don't have to purchase a brand new device. All you need to do is bring your device in, and we will simply switch out the battery door.

This easy and convenient rechargeable technology provides a full day's use with one overnight charge and allows you to hear without hassle. And if you happen to forget to charge your device one night, you can easily switch your rechargeable batteries out for disposables.

TV Streamers

TV streamers are a popular product for those with hearing loss and their families; they are used so everyone can have an enjoyable TV watching experience. Oticon offers the ConnectLine and StreamerPro, which provide rich, natural sound with no delays. These devices send sound straight to your hearing aids while your family listens at a comfortable volume. ReSound's TV Streamer 2 works similarly, streaming sound directly to your devices from as far away as 23 feet.

Remote Microphones

Phonak Roger™ Clip-On Mic helps those with hearing loss hear their conversation partner in noisy backgrounds and from a distance. This device provides up to 62 percent more understanding in noise compared to those without hearing loss. The microphone settings automatically adjust to the noise levels around you as well as the speaker.

Landline BT Phone

The Phonak DETC and Widex PHONE-DEX are cordless phones that automatically stream calls to your hearing aids, resulting in improved speech understanding. These devices feature a direct dial button, hands-free mode and compatibility for those without hearing loss. There is no feedback and no need to use a telecoil or streamer.
